

Task 5: Capture and Analyze Network Traffic Using Wireshark

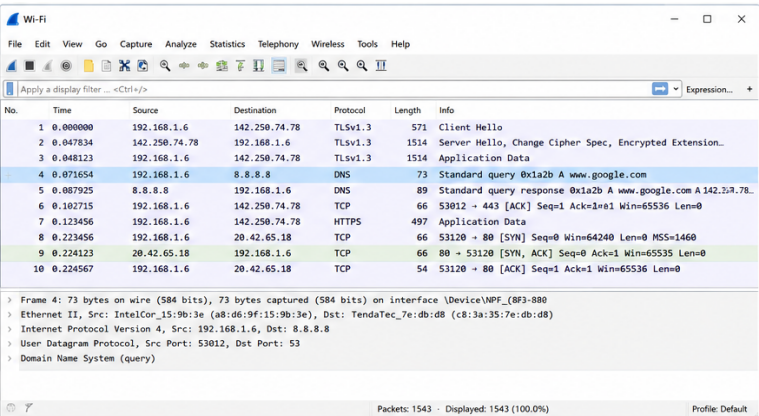

Prepared Internship Submission Report

Objective

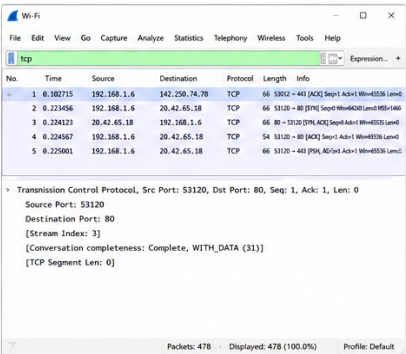

Capture live network traffic using Wireshark and analyze TCP, DNS, HTTPS/TLS protocols.

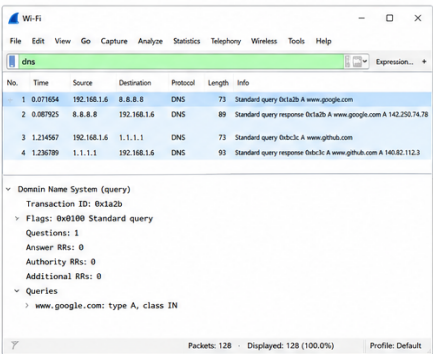

1. Wireshark Interface (Start Page)

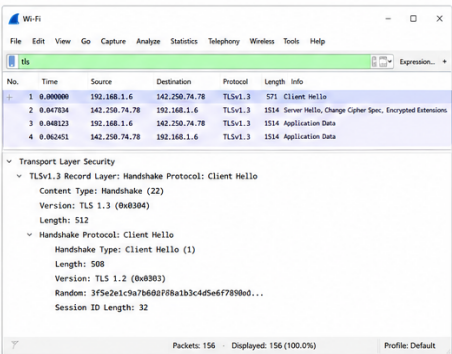

2. Packet Capture (Live Traffic)

3. TCP Filter Applied (tcp)

4. DNS Filter Applied (dns)

5. Protocol Analysis (Packet Details)

Findings

Successfully captured network traffic, applied protocol filters, and analyzed packet details.

Protocols observed: TCP, DNS, HTTPS/TLS.

Conclusion

Wireshark is a powerful packet analysis tool used for troubleshooting and cybersecurity monitoring.
